Flat-stemmed Spike-rush Eleocharis compressa

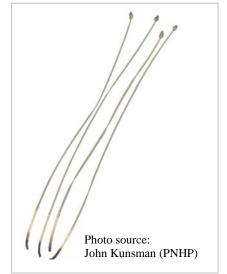

.....

Description

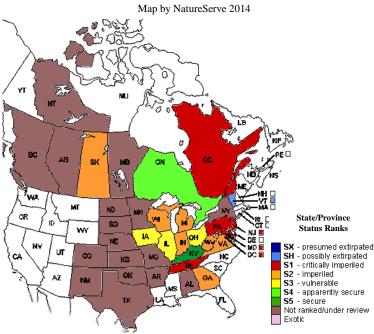

Flat-stemmed spike-rush is an upright perennial herb that grows from 6 inches to $2\frac{1}{2}$ feet (1.6-8 dm) tall, and forms colonies because of its underground stems. The aerial stems, which have a compressed or flattened appearance, make up most of the plant since the leaves are reduced to sheaths at the base of the stem. The minute flowers are held in a single spikelet, up to $\frac{1}{2}$ inch (13 mm) long, which is located at the top of the stem. The tiny fruits mature in summer and fall and are about $\frac{1}{16}$ inch (about 1 mm) long.

Distribution & Habitat

Flat-stemmed spike-rush has a large range through much of North America. In Pennsylvania, it has been documented historically in scattered counties, especially along the lower Susquehanna River. It grows on river shorelines and riverbed rock outcrops, which are subject to annual scouring.

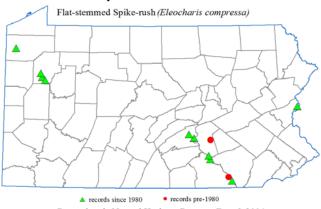

North American State/Province Conservation Status

Current State Status

The PA Biological Survey (PABS) considers flat-stemmed spike-rush to be a species of special concern, based on the few occurrences that have been recently confirmed and its specialized habitat. It has a PA legal rarity status and a PABS suggested rarity status of Endangered. Fewer than 10 populations are currently known from the state.

Pennsylvania Distribution

Flat-stemmed spike-rush appears to be restricted to riverine habitats in Pennsylvania. The viability of the known
